Higgsfield Videos

How we take a video that already works and make it hers, in her niche: Higgsfield puts her in the video, CapCut adds the music and the text hook. Watch the Loom first, then follow this step by step.

Version **v0.2** Updated **12 Nov 2026** Owner **K** Tool **Higgsfield · Factory · CapCut**

01 Watch first

Higgsfield video walkthrough (Loom by K). Watch all of it before you start. Come back to it any time.

Video not playing? Open it here:
https://www.loom.com/share/1b2006235e404ee0bcfbbbdd1206b1b0

K makes one full video from start to finish (Kira, Star Trek). The steps below are the same process, for any model and any video.

CapCut basics. Watch all of it before you start. Come back to it any time.

TO BE FILLED · tutorial link

02 What this is

We take a video that **already did very well** on social media (raw, made by a real creator) and remake it with **her**: her alone, or her with friends, whatever the original has. Then we make it belong to her niche.

> THE 3 THINGS THAT MAKE IT HERS
>
> **1 · Outfits** from her niche (Higgsfield).
> **2 · Music** that fits her niche (CapCut).
> **3 · Text hook**: the words on screen that stop the scroll (CapCut).

Keep what made the original work: the motion, the energy, the setting, the variety. Change only what makes it hers.

Why this works: the original already proved people stop and watch it. We keep the part that grabbed them and point it at her fans. Learning to see *why* a video works is the real skill here: it's instinct, pattern recognition and emotion, and it grows with every video you make.

03 Before you start

- ☐ **Higgsfield** open on the laptop. Log in with **your Santor Google account** (your Santor Gmail). K hasn't given you one yet? Use **K's email** to practise: ask K.
- ☐ **CapCut** installed on the laptop.
- ☐ **The Factory** open: Idea Bank, Song library, Reference library.
- ☐ Your task: the video to remake, or "pick one from the Idea Bank".

04

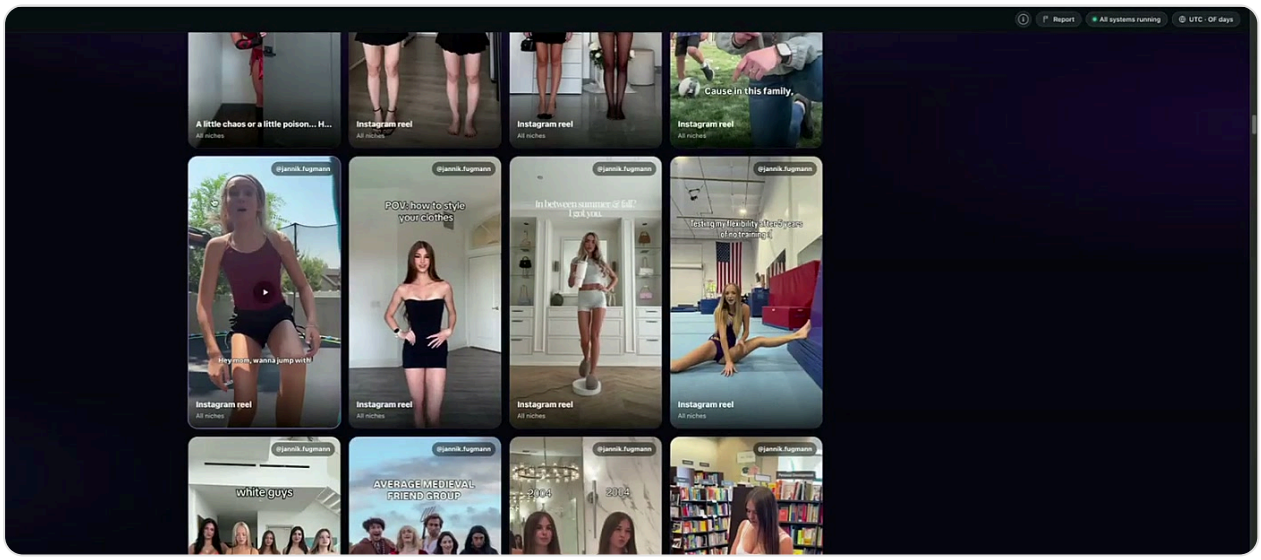

Step by step: a simple video

1 Pick the original

Your task gives you a video, or K or Leon sends one on Slack. If not, pick one from the **Idea Bank**: videos we saved because they did very well.

Idea Bank: santor-media.up.railway.app/higgs · older ideas: santor-media.up.railway.app/prompts#ideas

Once you've learnt winning videos, you join the **ideas group chat**. Send videos you think would work for her; the good ones go into the Idea Bank. **TO BE FILLED** · the group chat

2 Watch it: why does it work?

Watch it once, as a fan would. Then say in one sentence **why it works**: what makes you stop? The girls, the outfits, the setting, the noise, the moment something happens?

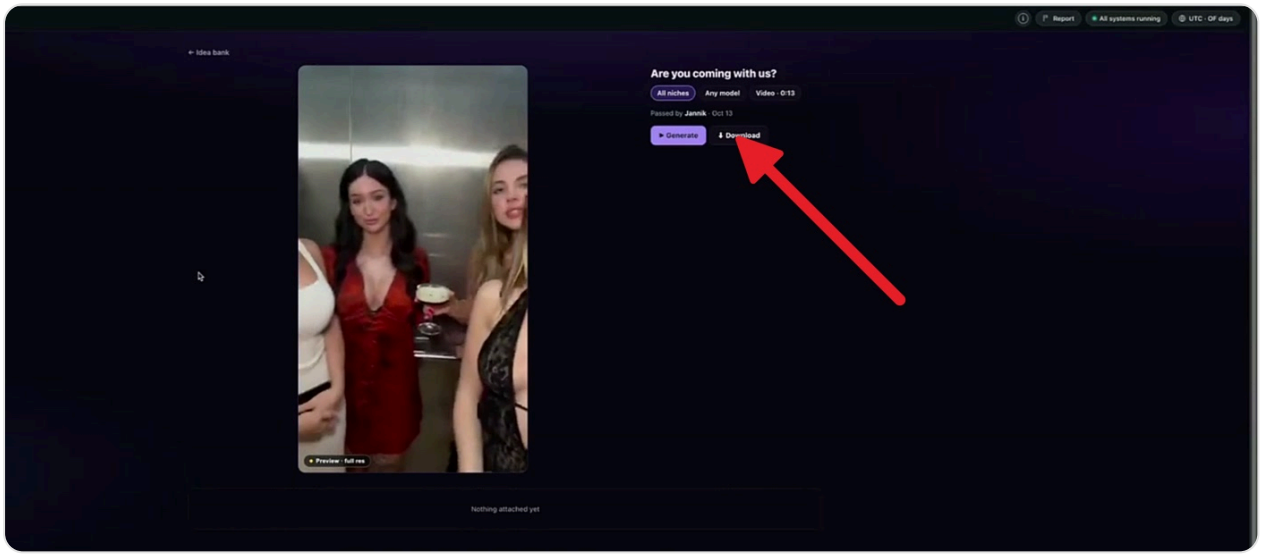

K's example: several girls in sexy outfits, lots of noise, and you feel like you're in the elevator with them.

Why: that sentence tells you what to keep. If you can't say why it works, you'll change the wrong thing.

3 Download it

From the Idea Bank or Slack: press **Download**.

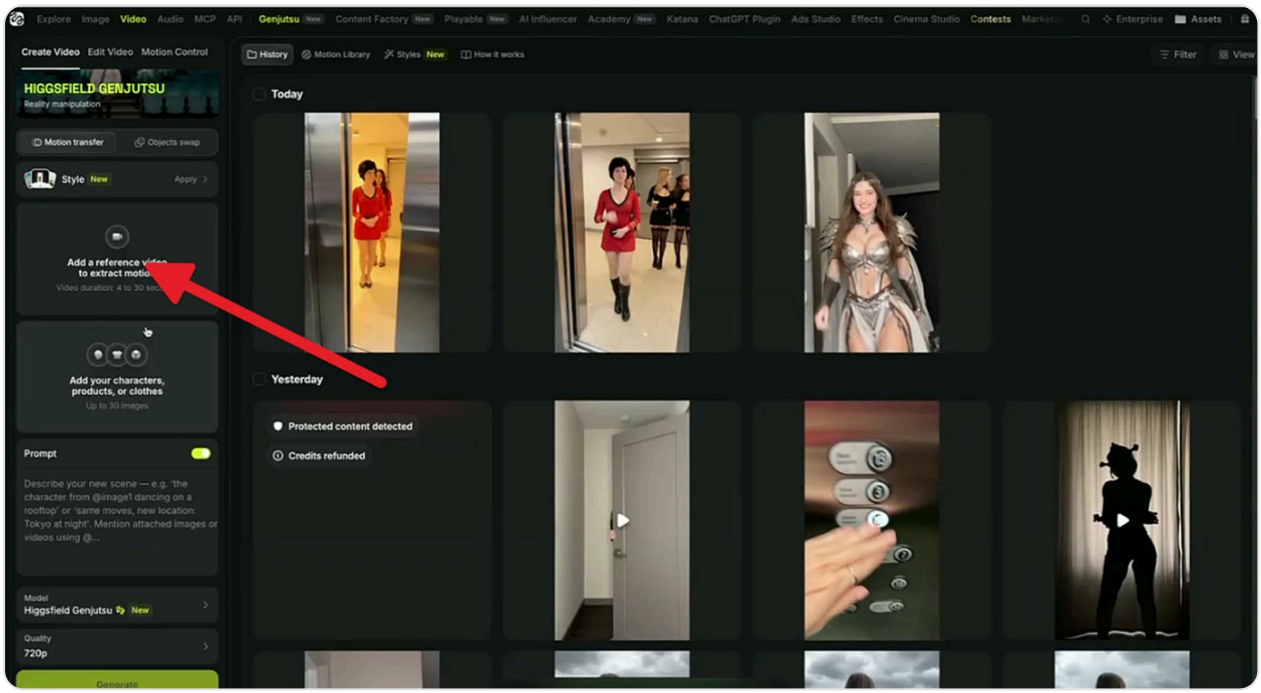

Found it somewhere else, like Instagram? Download it with an **Instagram downloader**: copy the post's link, paste it in, download. **TO BE FILLED** · which downloader

4 Higgsfield → Genjutsu

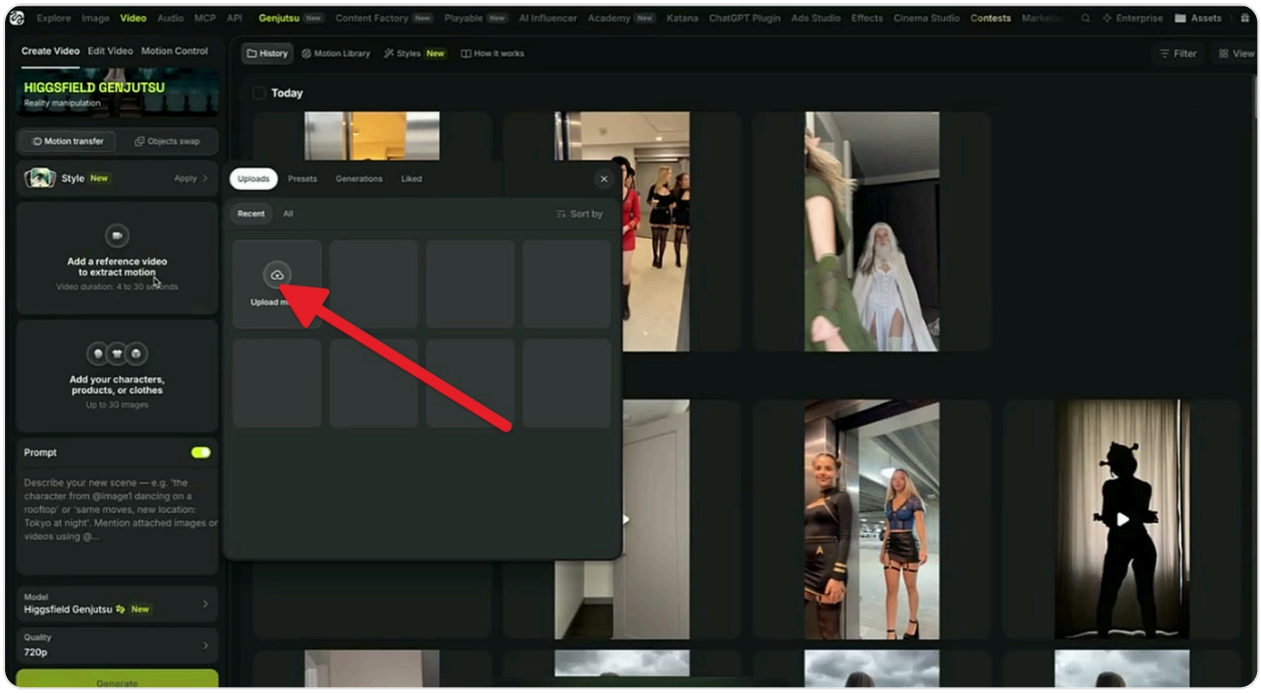

In Higgsfield: **Video → Genjutsu**. Check **Motion transfer** is selected. Clear anything left from before. Press the empty box to add the reference video.

Why: Genjutsu takes a real video and puts our people and outfits inside it. The motion stays exactly the same.

5 Upload the original

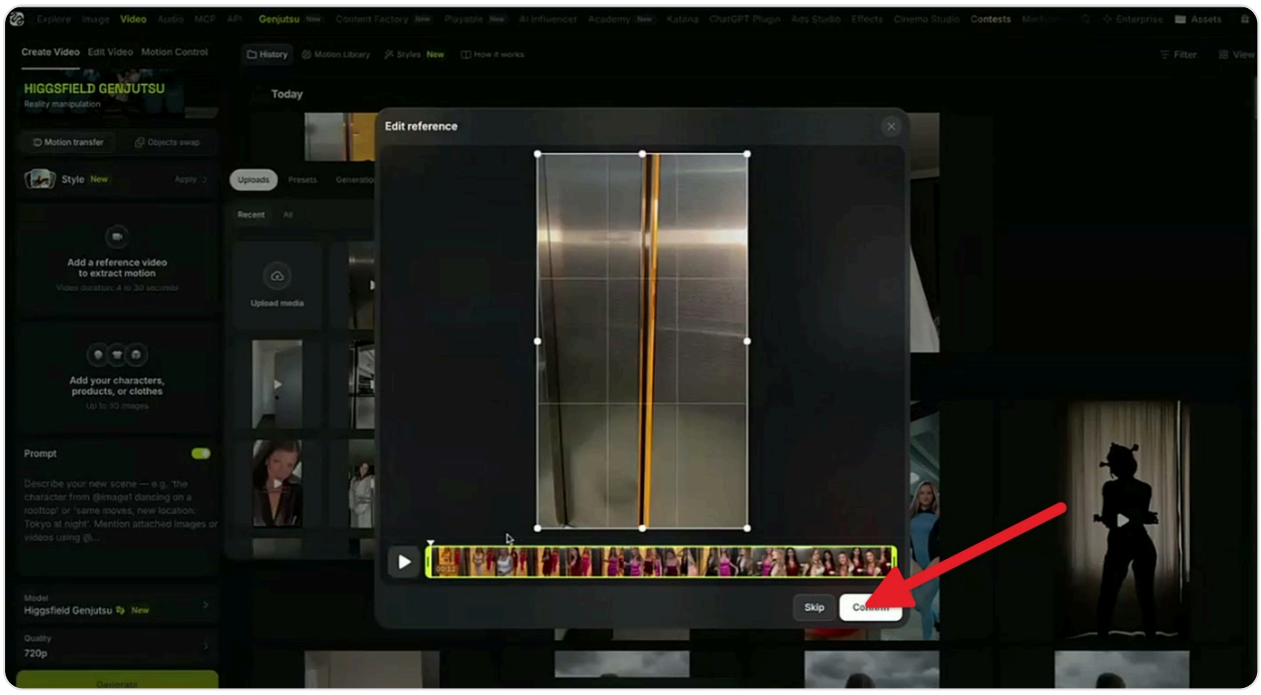

Press **Upload media**, pick the video you downloaded, press **Open**.

6 Trim, then Confirm

Watch it once more. Anything at the start or the end you don’t need? Drag the yellow handles to cut it. Press **Confirm**, then click the video in the library so it’s selected.

Why: every extra second is credits and one more place for AI to go wrong. Keep only what the video needs.

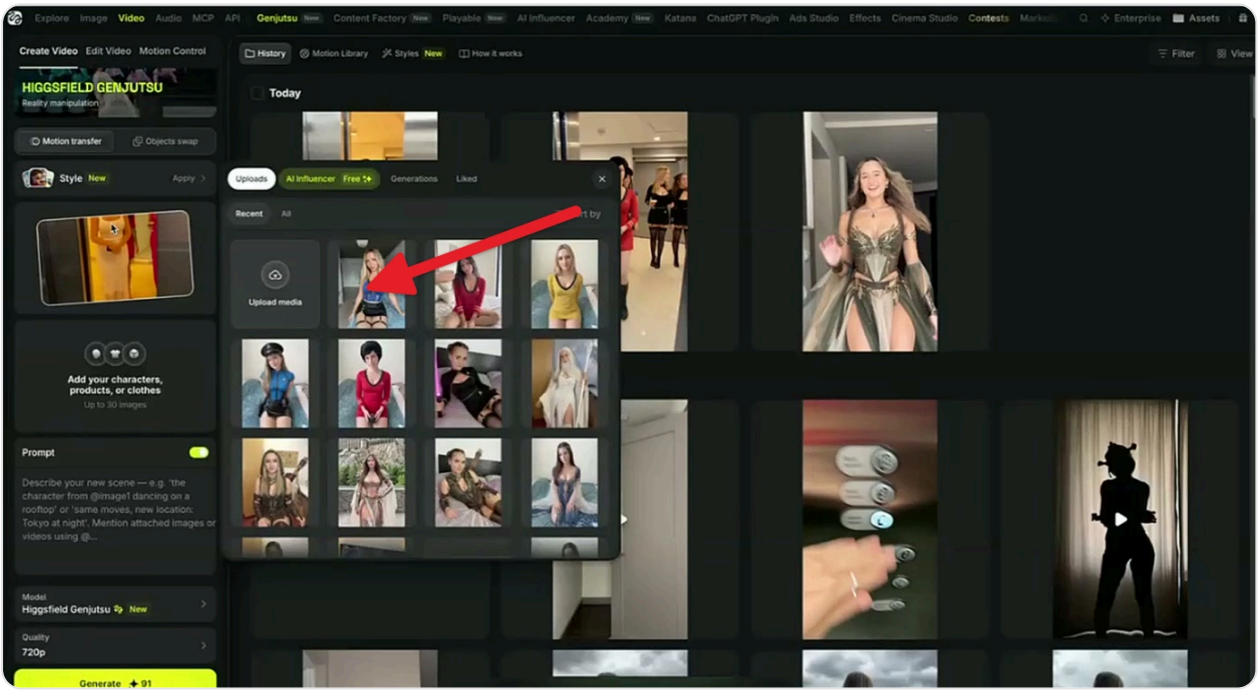

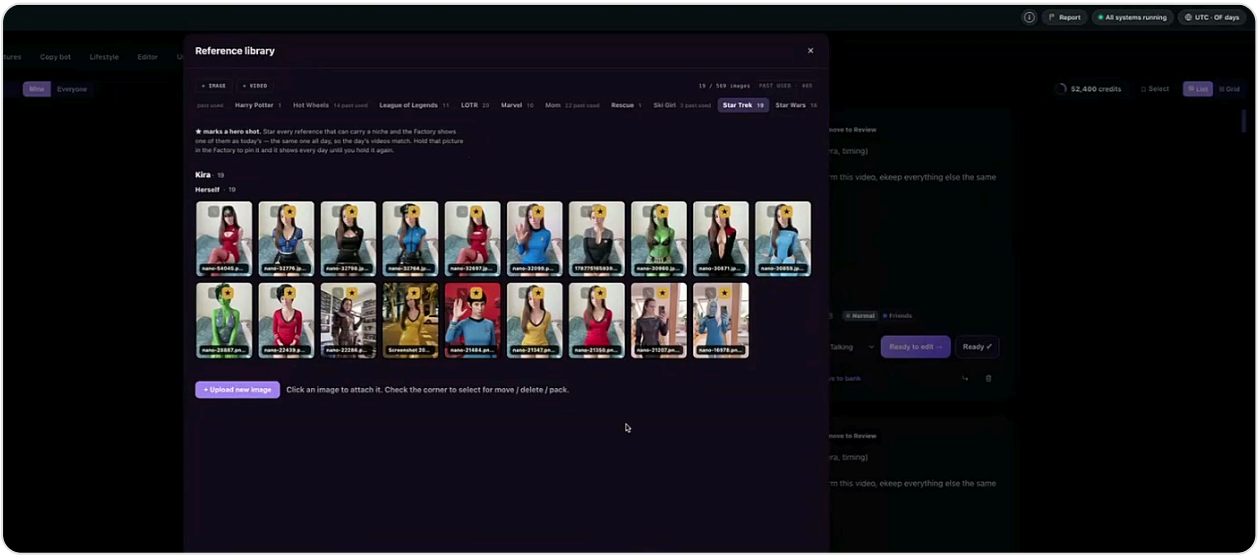

7 One character per person

Count the people in the video. Press **Add your characters** and add **one picture per person**, in the order they appear: her, and her friends if there are more people.

Keep the variety the original had. Different outfits, different hair? Pick different ones too.

Need her pictures? Factory → **Add reference** → **Reference library** → her niche: her outfits and her friends.

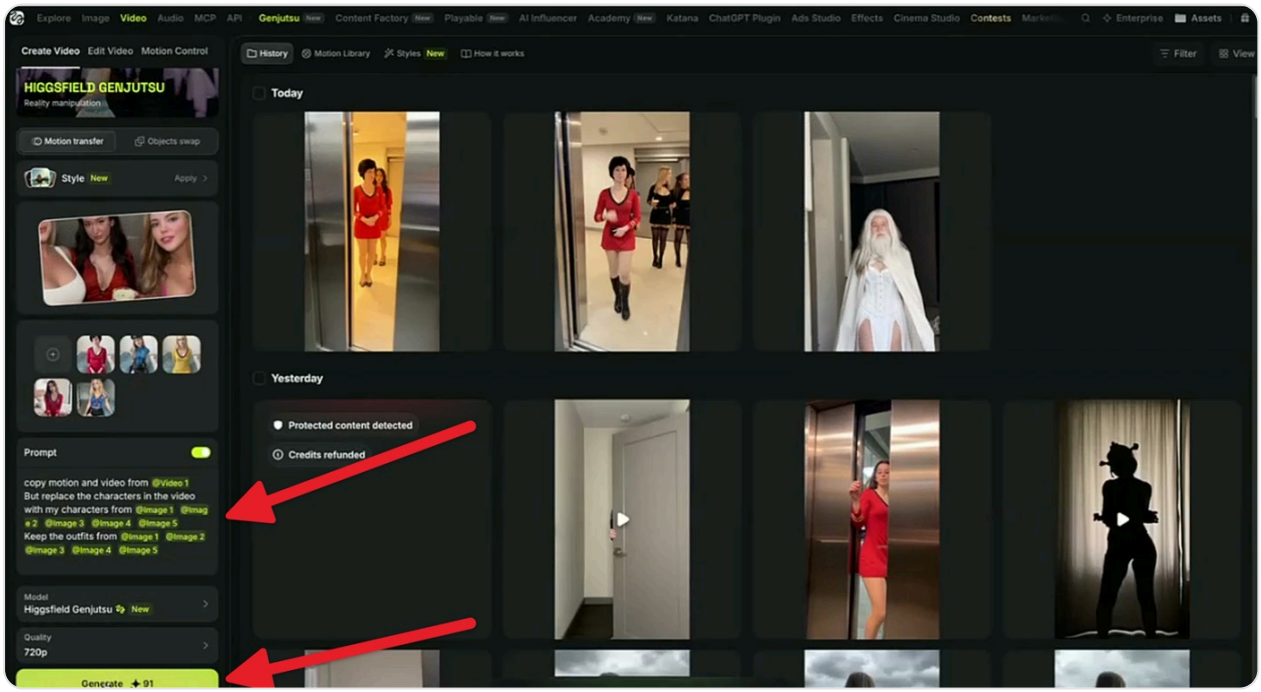

8 The prompt: 3 lines

AI is like a very smart child: it does exactly what you say, nothing more. Paste this and set the number of images to the number of people:

```
copy motion and vibe from @Video1
but replace the characters in the video with my characters from @Image1
@Image2 @Image3
Keep the outfits from @Image1 @Image2 @Image3
```

- **Line 1** keeps the movement and the vibe. No dancing or jumping that wasn't there.
- **Line 2** puts our characters in place of the people. Image 1 replaces the first person, image 2 the second, and so on.
- **Line 3** makes it use **the outfits** too, not only the faces.

9 Settings, then Generate

Model: **Higgsfield Genjutsu**.

Quality: 420p. Always.

Want 720p? **Ask K first.**

Double-check the video, the pictures and the prompt. Press **Generate**. It takes a few minutes.

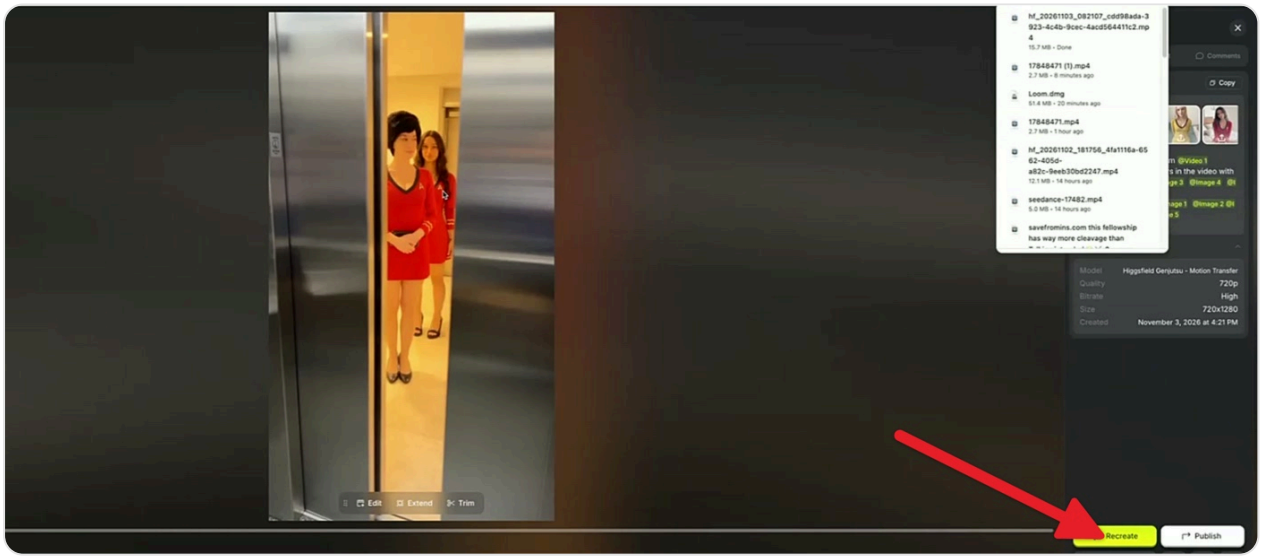

10 Watch it, fix it, download

Watch the result all the way through, like a fan.

- Two people swapped outfits? **Fine.**
- Everyone in the same outfit, a face wrong, something AI-looking? **Change something before you generate again**: an outfit, the order of the pictures, a line of the prompt.

Why: the same settings give the same mistake. Change one thing, then try again.

Good? Press **Download**.

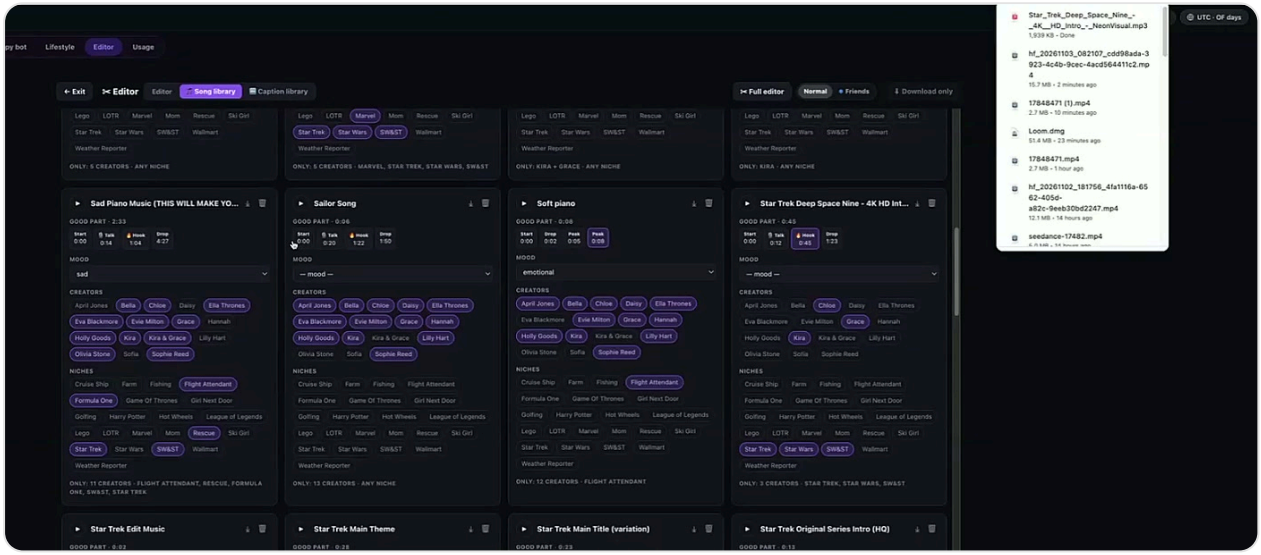

11 Music

Music is what makes a viewer **feel** the niche. Three ways:

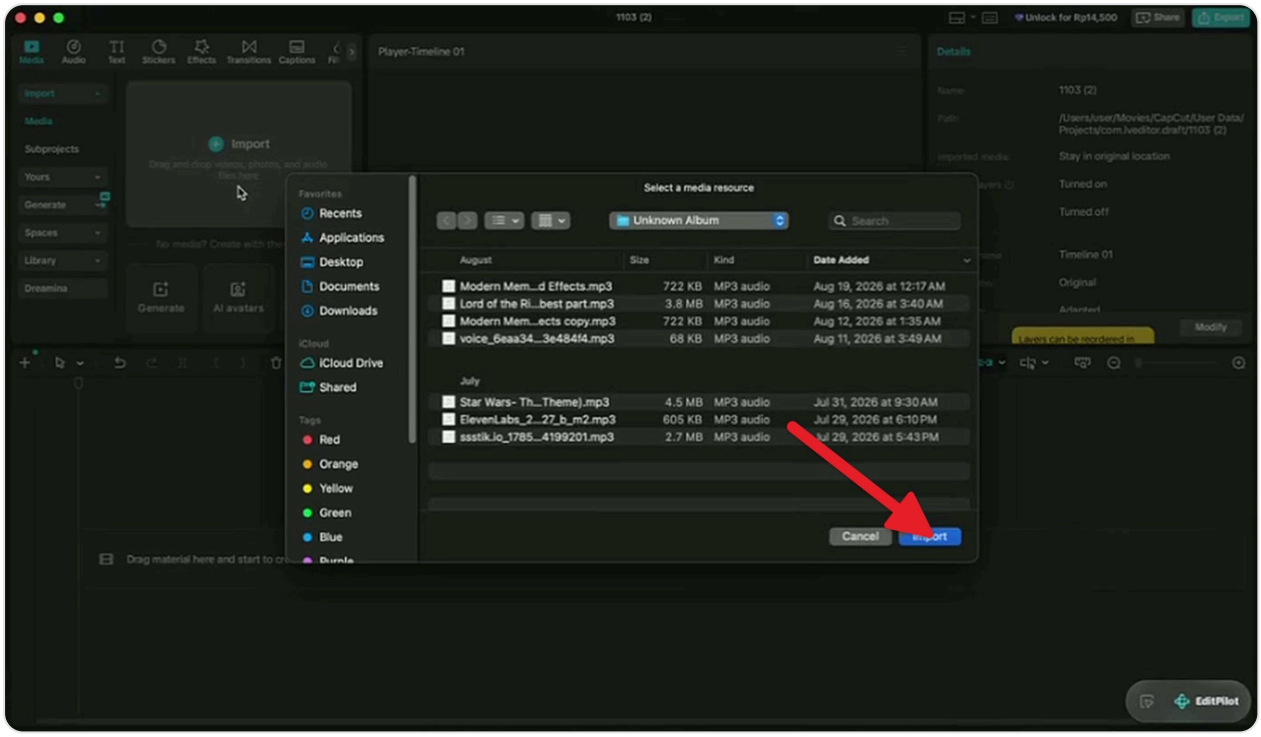

- **Keep the video's own music** if it already fits.
- **Factory → Song library** → search her name → a song from her niche → Download.
- **A song from YouTube**: copy the YouTube link, paste it into ezconv.org, download it.

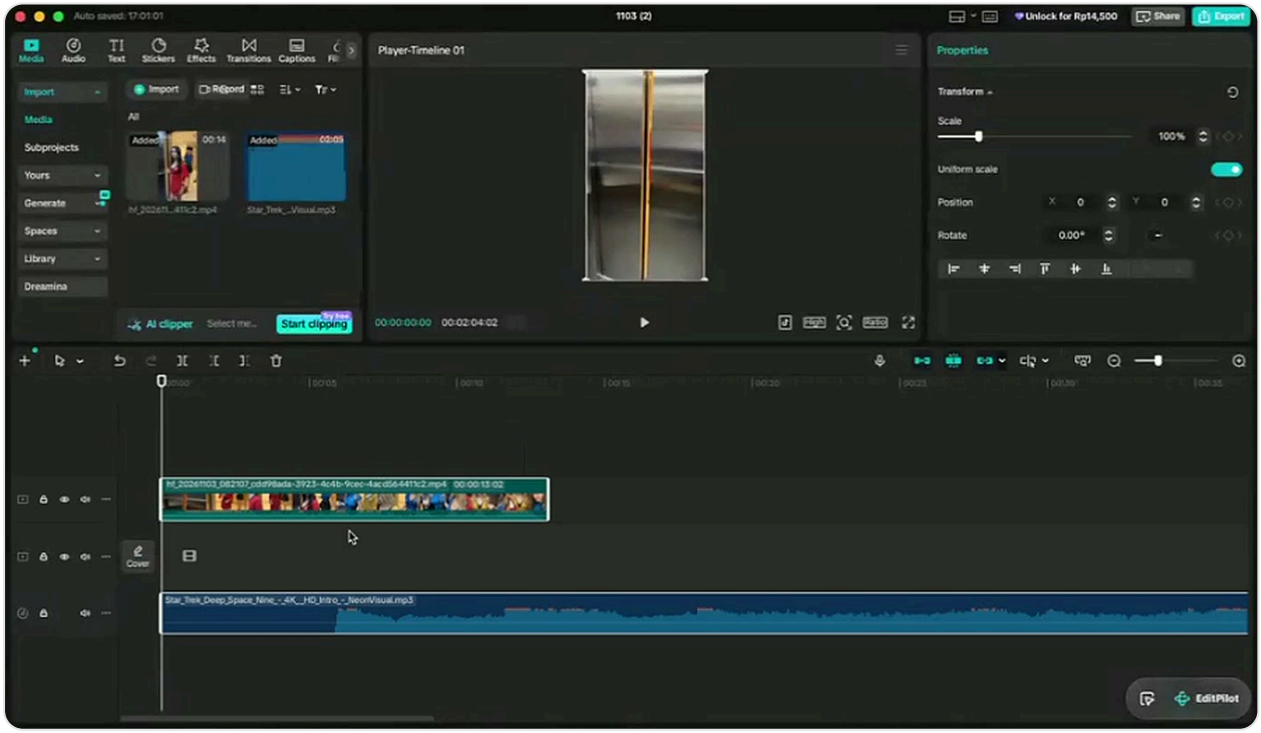

K's example: the Star Trek Deep Space Nine theme for Kira. A fan recognises it in one second.

12 CapCut: video and music in

Open CapCut → **Create project** → **Import** → the video, then the music. Drag both onto the timeline: video on top, music below.

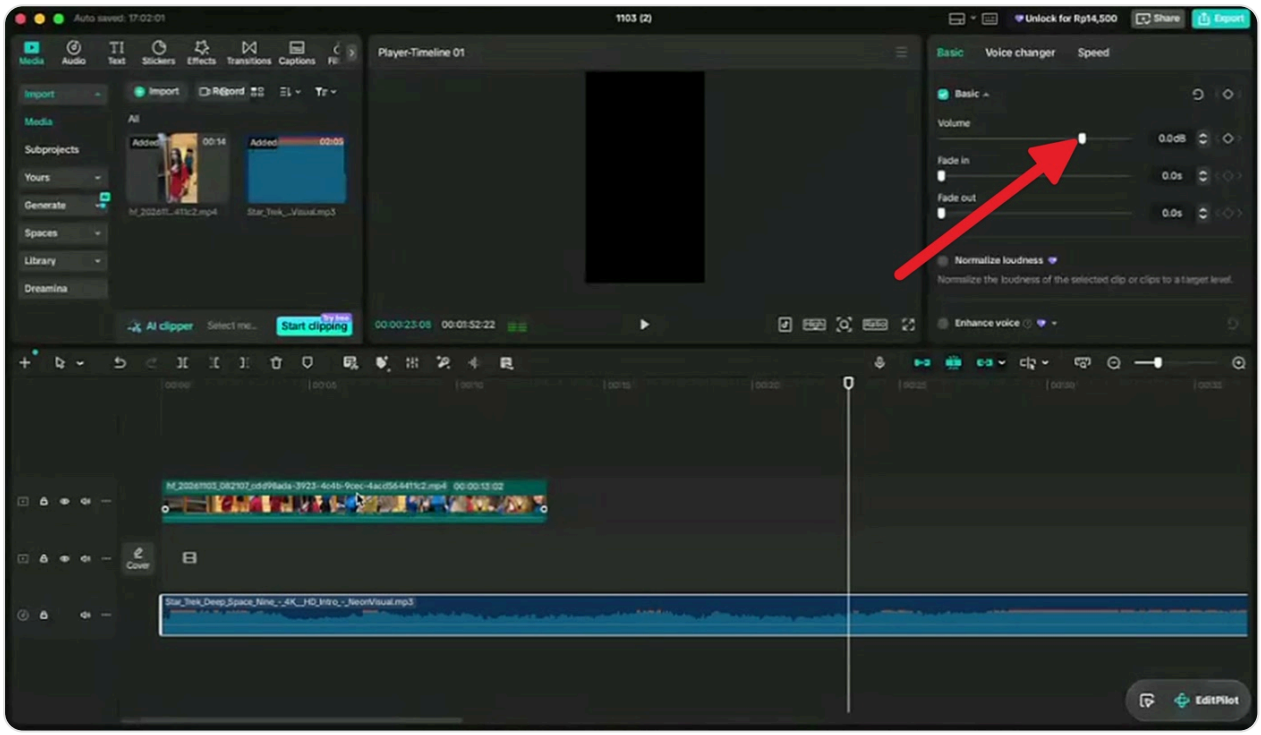

13 Time the music to the hook

Play the video alone and find **the hook**: the moment you'd stop scrolling (K's: the doors open). Bring the strongest part of the song in right there.

- Cut the music where the video ends.
- Turn the **video's own sound down** so the music carries it, but the original sound is still there.
- Play them together and adjust until it feels right.

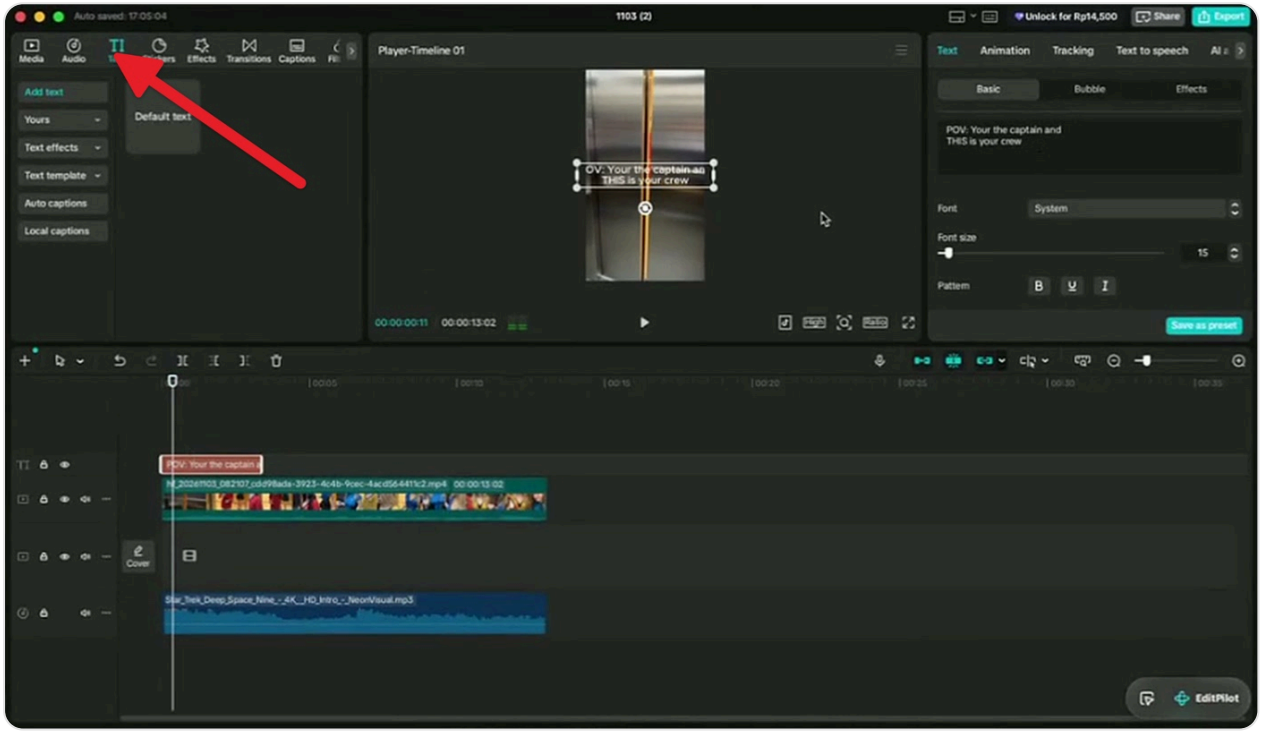

Why: the first second decides if someone keeps watching. Sound landing on the hook makes it hit harder.

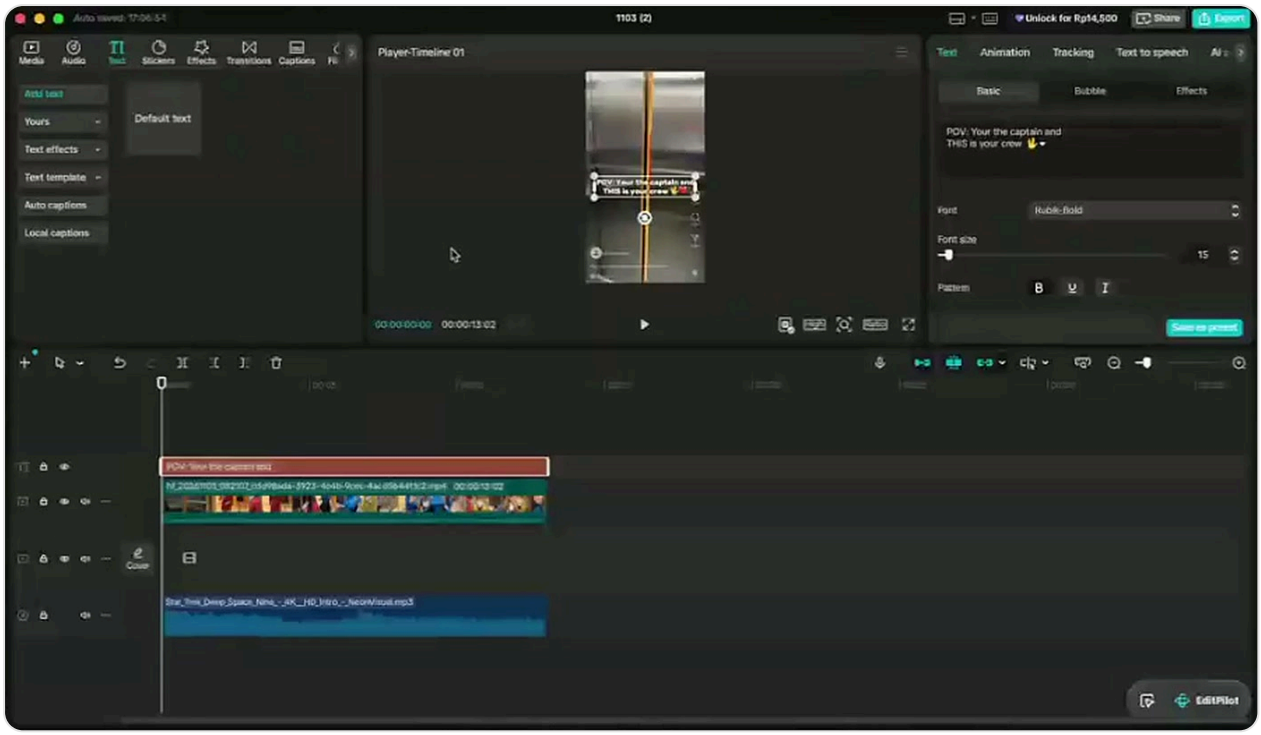

14 The text hook

The **text hook** is the words *on* the video. (The caption is what goes *under* the post.) Almost every video needs one. How to pick it: the next section, **Text hooks**.

- **Text → Default text**, then type it.
- A font that fits her niche and is **easy to read** (see Text hooks). Bold, not too big.
- An emoji or two if it fits.
- Place it where it **never blocks a face**.

15 Compare with the original

Watch the original, then yours. Same hook, same energy, but now it's **hers**: her outfits, her music, her text hook. Would a fan of her niche stop on it?

TO BE FILLED · K's original and finished video, side by side

16 Export, save to Drive

Export from CapCut: **9:16, highest quality**. Save it in her Drive folder → **Reels** (SOP: Google Drive).

Remaking a reference video for your task? Put **the original and yours side by side** in your task.

05 Text hooks

The text hook has **a split second** to stop someone scrolling. It isn't decoration: it tells the viewer what they're looking at, and how to feel about it.

> A GOOD TEXT HOOK
>
> **Hooks in a millisecond.** Short. Read at a glance.
> **Adds context.** It says what's going on, and ties it to her niche.
> **Puts the viewer in the scene.** The best ones make him imagine himself there.
> **A bit funny**, and always related to the video and the niche.
> **Never a question on screen.** Questions go in the caption under the post.

Example: POV: you're the captain, and this is your crew ❤️

Why it works: the viewer is a Star Trek fan, a man. He reads it and he's the captain, in the elevator, and the girls are his crew. He isn't watching a video any more; he's in it.

Where to find winning text hooks: the reference accounts on your board, and other winning videos in her niche. Find one that worked on a video like yours, then adapt it to her.

Fonts: any font, as long as it's **very clear**. A font that echoes her niche adds context: Sophie (Lord of the Rings): **Lucette**. Star Trek: a font like the Star Trek logo. Copying a video 1:1? Use its font (K's was Rubik, bold). **TO BE FILLED** · the exact font names per niche in CapCut

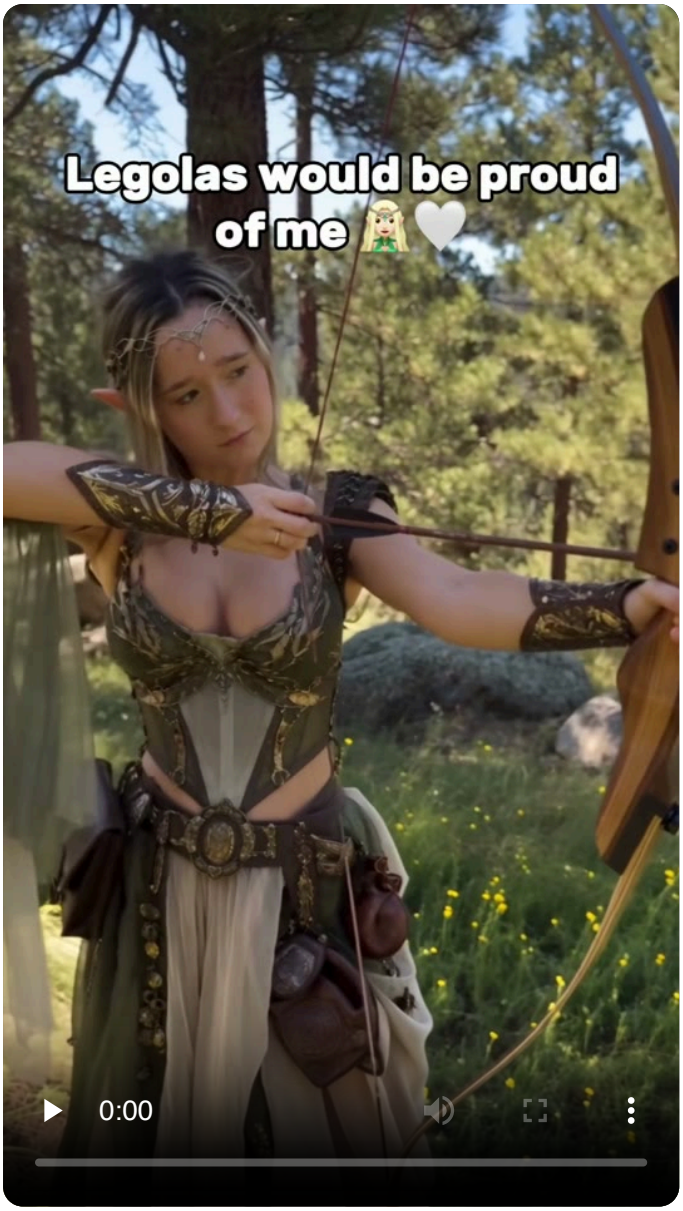

More winning text hooks (watch them in Kinds of videos, below):

- **Legolas would be proud of me** 🧝 🤍 : names the fan's hero. Instantly his world.
- **POV: You accidentally run into your future LOTR wife in the elevator** 🧝 💍 : he's in the scene, and it's his fantasy.
- **"What do you wanna watch?" · "I don't know"**: a tiny dialogue everyone has had. Relatable, then the twist.

TO BE FILLED · more winning text hooks per niche, from K

06 Kinds of videos

Tap to play. ⤢ Bigger opens it full screen.

SINGLE

Text hook: *Legolas would be proud of me 🧝‍♀️🤍*

One girl, her niche in every detail: elf outfit, bow, forest. The hook speaks to every Lord of the Rings fan by naming his hero.

SINGLE

Text hook: *POV: You accidentally run into your future LOTR wife in the elevator 🧝‍♀️💍*

A POV hook: he isn't watching her, he's the one meeting her. "Future wife" is the fantasy, said with a wink.

FRIENDS

Text hook: a little dialogue, *“What do you wanna watch?” · “I don’t know”*

An everyday moment everyone knows, then the friends turn up in costume. Funny, relatable, and the niche lands as the punchline.

TRANSITION

No text: the *Star Trek* logo does the job

Outfit after outfit on a beat. The logo says the niche in one glance, so no words are needed.

- **Single**: her alone. **TO BE FILLED** · notes
- **Friends**: her with friends. **TO BE FILLED** · notes
- **Transition** (2 or more outfits): **TO BE FILLED** · how

TO BE FILLED · more examples per kind

07 More prompts

Copy one exactly. Add details at the end if you want.

Copy the motion and vibe

```
copy motion and vibe from @Video 1
and recreate it with my character’s from
the reference images

Keep the outfits from the persons in reference images

without text or caption in the video
```

Copy the exact motion

```
copy the exact motion, body movements and vibe from <<<video_1>>> bringing it into
the new video
and recreate it with my character’s from
the reference images
Keep the outfits from the persons in the reference images

without text or caption in the video
```

08 A complex video

Harder videos, more steps. **TO BE FILLED** · K’s second Loom and the steps

09 Rules and nuances

- **Quality: 420p. Want 720p? Ask K first.**
- Log in with your Santor Google account (K’s email to practise).
- Export: 9:16, highest quality.

TO BE FILLED · anything else not in the Loom

10 Done means

- ☐ The number of finished videos your task asks for.
- ☐ Each one: her (and friends if needed) in niche outfits, music that fits, a text hook that stops the scroll and blocks no face.

- ☐ Made at 420p, unless K said 720p.
- ☐ Looks real. Nothing AI-looking.
- ☐ Exported 9:16, saved in her Reels folder in Drive; original and yours side by side in your task.
- ☐ Reviewed with K.

11 Common mistakes

- **Generating in 720p** without K's yes.
- **Generating again without changing anything.**
- **Everyone in the same outfit.**
- **Music that misses the hook**, or keeps playing after the video.
- **A text hook over a face**, or a question on screen.
- **Changing what made the original good.**

TO BE FILLED · Added after every review with K
